Akuresa, Matara

SUMMARY

Highly motivated Full Stack Software Engineer with hands on experience in developing and maintaining web based software solutions using Laravel, the MERN stack, MySQL, and MongoDB. Experienced in frontend and backend development, database design, authentication integration, and collaborative development using version control tools. I have also contributed in team leadership responsibilities, supporting coordination and smooth execution of development tasks. I am a dedicated and adaptable software professional with a strong passion for delivering reliable, scalable, and user focused solutions.

WORK EXPERIENCE

Freelance Software Developer

May 2025-Present

Sri Lanka Telecom PLC

- Contributing to the development of the Debt Recovery System using the MERN stack.
- Collaborating on system design, feature development, and ongoing enhancement of the application.
- Design and manage database structures based on system and business requirements
- Lead and coordinate a development team of 5/6 interns, ensuring effective task management and progress tracking
- Use GitHub and Visual Studio Code to support development, version control, and collaborative workflows
- Conducted knowledge sharing sessions for new interns on the system, architecture, and development approach

Freelance Software Developer

December 2025-Present

CodeWave PVT LTD

- Working on a Gems Auction System using blockchain concepts, with current focus on requirement gathering and system planning
- Contributing to the development of software solutions such as POS systems, portfolio websites, and a betting application backend using Next.js
- Supporting requirement analysis, feature planning, and implementation to deliver solutions aligned with client requirements

Intern - Software Developer

April 2025 - May 2024

Sri Lanka Telecom PLC

- Developed a voucher management system using Laravel for both frontend and backend development
- Integrated Google and Facebook authentication for secure user login functionality
- Managed MySQL database operations and used Bitbucket for version control and team collaboration
- Contributed to the initial development of the debt recovery system using the MERN stack
- Designed database structures based on technical and business requirements
- Led one development team as the main developer, supporting task coordination and implementation progress
- Managed Bitbucket repositories to maintain code organization and collaborative development workflows
- Conducted knowledge sharing sessions on Bitbucket, helping team members understand repository management and team based development practices
-

TECHNICAL SKILLS

- Languages: JavaScript, Java, PHP, C#, Python
- Frontend Technologies: React.js, Next.js, Tailwind CSS, Angular
- Backend Technologies: Node.js, Express.js, Laravel, .NET
- Databases: MongoDB, MySQL
- Development Tools: GitHub, Bitbucket, Visual Studio Code
- Technical Strengths: Full Stack Development, Database Design, Authentication Integration, Team Coordination, Version Control

PROJECTS

Debt Recovery System

November 2024 - Present

- A full stack enterprise platform developed to improve debt recovery processes through organized data management, workflow support, and efficient system operations. Technologies: MERN Stack, MongoDB, MySQL

TransQuizX: An Explainable AI-Based Adaptive Assessment

May 2025 - March 2026

- An AI powered personalized learning path and note generation system built using YouTube transcripts, Explainable AI, and RAG to deliver adaptive learning support and improve the clarity and relevance of educational content.
- Technologies: Python, Machine Learning, React, RAG system, Lang Chain

MIIndVault

September 2023 - March 2024

- A smart learning system developed to create a more effective learning environment by analyzing user learning curves and supporting adaptive educational experiences. Technologies: MEAN

SKILLS AND STRENGTHS

- Full Stack Development: Hands on experience in developing and maintaining web based software solutions using Laravel, the MERN stack, and modern software development tools.
- Frontend and Backend Engineering: Building responsive frontend interfaces and efficient backend functionalities to deliver reliable, scalable, and user focused applications.
- Database Design and Administration: Designing and managing MySQL and MongoDB databases based on technical and business requirements to ensure strong data structure and system efficiency. Authentication and Access
- Integration: Implementing user authentication features including Google authentication and Facebook authentication to support secure access control.
- Version Control and Collaborative Development: Using GitHub and Bitbucket for source code management, team collaboration, and structured development workflows.
- Team Leadership: Leading intern and development teams, coordinating tasks, monitoring progress, and supporting effective execution of development responsibilities.
- Technical Training and Knowledge Sharing: Delivering learning sessions to help new team members understand system architecture, development workflows, and collaboration platforms.
- Requirement Gathering and Planning: Contributing to requirement analysis and solution planning to support the delivery of practical and business aligned software systems.

EDUCATION

BEng (Hons) in Software Engineering (UG) (Second Upper)

September 2022 - 2026

Informatics Institute of Technology (IIT)

GCE A/L 2021 2 B passes and C pass from the physical science stream

February 2022

Telijjawila Central Collage

Successfully completed 2 months English Diploma

March 2022

Britishway English Academy
